MANOJ KUMAR R

AZURE DEVOPS & PLATFORM ENGINEER

Erode, India | +91 6379632899 | manojmanojkumar2513@gmail.com | linkedin.com/in/manoj2606 | github.com/manoj-2606

CORE SKILLS

Cloud & Architecture
Azure, Cloud Computing, Platform Landing Zone (ALZ), Management Groups, Hub-Spoke Topology, Azure Policy (DINE), Cloud Governance, Subscription Design

Infrastructure as Code
Terraform (HCL), Infrastructure Automation, AVM Modules, ALZ Terraform Accelerator, Feature-Flag Architecture, Remote State (Azure Blob)

CI/CD & DevOps
Continuous Integration, Continuous Deployment, Azure DevOps Pipelines, GitHub Actions (OIDC), Jenkins, Argo CD, Helm, GitOps, Version Control (Git)

Containers & Cloud Native
Docker, Containerization, Kubernetes (AKS), Microservices, Bash, PowerShell, YAML

Collaboration & Delivery
Agile, Scrum, ITIL, ServiceNow, Incident Management, Release Management, Cross-functional Teams

KEY METRICS

99.9% Production Uptime	**75%** Deployment Time Saved
1 wk Full PLZ Delivery	**70+** Weekly ITIL Requests
160+ GitHub Commits (OIDC)	**50+** Internal White Papers

CERTIFICATIONS

Microsoft AZ-900
Azure Fundamentals · Microsoft · 2023

EDUCATION

B.E. Mechanical Engineering
Kongu Engineering College (Autonomous)
Anna University · 2022 · 85.7%

LANGUAGES

English — Professional
Tamil — Native

SUMMARY

Azure DevOps Engineer and Platform Engineer specialising in enterprise **Azure Landing Zones (ALZ)**, **Terraform infrastructure automation**, and **OIDC / Workload Identity Federation**. Independently designed and delivered a hybrid 20% manual / 80% automated deployment model — adopted as organisational standard. Experienced in diagnosing critical pipeline failures, building production-grade cloud infrastructure, and implementing Microsoft-aligned DevOps and platform engineering patterns at enterprise scale. 3.6 years of hands-on experience in cloud computing, CI/CD automation, and Agile delivery with a zero SLA breach record.

EXPERIENCE

Azure DevOps & Platform Engineer
Sep 2025 – Present
LTM (LTIMindtree) · India

- **Delivered a single-region enterprise Azure Platform Landing Zone** using ALZ Terraform Accelerator via Azure DevOps in **under 1 week** — a setup that typically requires 3 to 4 weeks — with full hub-spoke topology, cloud governance hierarchy, and centralised monitoring from day one.
- **Independently designed and presented** a hybrid deployment model — **20% manual governance checkpoints, 80% fully automated pipeline execution** — to senior leadership and infrastructure architects; adopted as the standard delivery approach for the project.
- **Recovered critical Terraform state** (stale blob lease corruption) without data loss by breaking the active lease and restoring the errored state file — **unblocked production pipelines with zero rollback**.
- **Eliminated persistent pipeline authentication failures** by enforcing Azure AD-only storage access policy across all Terraform stages — permanently fixed access-denied errors that blocked the team for multiple days.
- **Architected a feature-flag-driven Terraform module structure** using AVM patterns enabling safe partial deployments without state corruption — adopted as team standard for incremental ALZ rollout.

Azure DevOps Engineer
Aug 2022 – Aug 2025
Cognizant Technology Solutions · Chennai, India

- Maintained **99.9% application uptime** across critical production systems for multiple enterprise clients over 3 years; proactively contained incidents and minimised downtime on Azure cloud environments.
- Engineered PowerShell automation scripts that **cut deployment time from 1.5 hours to under 25 minutes** (75% reduction) — fully eliminating manual handoff steps across production and non-production release cycles.
- Managed **Azure DevOps CI/CD pipelines** for 2+ years — continuous integration, continuous deployment, release approvals, and pipeline triage — across multi-client environments using Agile methodology.
- Coordinated **70+ weekly ServiceNow (ITIL) requests** — SQL deployments, production releases, change management — with **zero SLA breach** across all production cycles.
- Administered end-to-end **SSL certificate lifecycle** — installation, renewal, and compliance tracking — across test and production servers for multiple enterprise clients.
- Implemented containerization and CI/CD workflows using **Jenkins, Docker, Kubernetes (AKS), and Argo CD** to streamline microservices delivery and reduce pipeline lead time.
- Authored **50+ internal white papers** on Azure DevOps pipeline setup, Terraform state management, and CI/CD architecture — cut new engineer onboarding time and reduced reliance on external consultants.

PROJECTS

Azure Platform Landing Zone — Enterprise IaC github.com/manoj-2606/Azure-Landing-Zones
Deployed ALZ using **Terraform AVM modules** with Hub-Spoke networking, Azure Policy (DINE), RBAC, Private DNS Resolver, and centralised Log Analytics — Microsoft-aligned single-region cloud infrastructure with full management group hierarchy.

Azure + GitHub Actions — OIDC Automation github.com/manoj-2606/azure-github-actions
Implemented **passwordless Azure authentication via OIDC / Workload Identity Federation** — eliminated all secrets from CI/CD pipelines, enabled secure auditable cloud provisioning with version control across **160+ structured commits**.

Terraform Modular Infrastructure — AVM Pattern Build github.com/manoj-2606/Terraform
Designed reusable **AVM-aligned HCL modules** for compute, networking, AKS, and remote state — scalable infrastructure automation with workspace-aware, production-pattern architecture and documentation at every milestone.
