CORE SKILLS

Cloud & Architecture

Azure, Cloud Computing, Platform Landing Zone (ALZ), Management Groups, Hub-Spoke Topology, Azure Policy (DINE), Cloud Governance, Subscription Design

Infrastructure as Code

Terraform (HCL), Infrastructure Automation, AVM Modules, ALZ Terraform Accelerator, Feature-Flag Architecture, Remote State (Azure Blob)

CI/CD & DevOps

Continuous Integration, Continuous Deployment, Azure DevOps Pipelines, GitHub Actions (OIDC), Jenkins, Argo CD, Helm, GitOps, Version Control (Git)

Containers & Cloud Native

Docker, Containerization, Kubernetes (AKS), Microservices, Bash, PowerShell, YAML

Collaboration & Delivery

Agile, Scrum, ITIL, ServiceNow, Incident Management, Release Management, Cross-functional Teams

KEY METRICS

AWARDS & RECOGNITION

Stellar Achiever — 2023

Cognizant — for PowerShell automation that cut release cycles from 1.5 hrs to 25 mins, eliminating recurring production failures.

Quality Implementer — 2024

Cognizant — zero SLA breach across 70+ weekly ITIL requests; sustained high-quality delivery year-round.

Client Commendation

"Talented & Fast Learning Worker" — 100+ production tasks in a single week, acknowledged directly by client leadership.

SUMMARY

Azure DevOps & Platform Engineer with **4 years of experience** specialising in enterprise **Azure Landing Zones (ALZ)**, **Terraform infrastructure automation**, and **OIDC / Workload Identity Federation**.

Independently designed and delivered a hybrid 20% manual / 80% automated deployment model — adopted as organisational standard. Experienced in diagnosing critical pipeline failures, building production-grade cloud infrastructure, and building **AI-powered DevOps tooling** (4 live SaaS products) with a zero SLA breach record.

EXPERIENCE

Azure DevOps & Platform Engineer

[LTM \(LTMindtree\)](#) · Coimbatore, India

Sep 2025 – Present

- Delivered a single-region enterprise Azure Platform Landing Zone** using ALZ Terraform Accelerator via Azure DevOps in **under 1 week** — a setup that typically requires 3 to 4 weeks — with full hub-spoke topology, cloud governance hierarchy, and centralised monitoring from day one.
- Independently designed and presented** a hybrid deployment model — **20% manual governance checkpoints, 80% fully automated pipeline execution** — to senior leadership and infrastructure architects; adopted as the standard delivery approach for the project.
- Recovered critical Terraform state** (stale blob lease corruption) without data loss by breaking the active lease and restoring the errored state file — **unblocked production pipelines with zero rollback**.
- Eliminated persistent pipeline authentication failures** by enforcing Azure AD-only storage access policy across all Terraform stages — permanently fixed access-denied errors that blocked the team for multiple days.
- Architected a feature-flag-driven Terraform module structure** using AVM patterns enabling safe partial deployments without state corruption — adopted as team standard for incremental ALZ rollout.

Azure DevOps Engineer

[Cognizant Technology Solutions](#) · Chennai, India

Aug 2022 – Aug 2025

- Maintained **99.9% application uptime** across critical production systems for multiple enterprise clients over 3 years; proactively contained incidents and minimised downtime on Azure cloud environments.
- Engineered PowerShell automation scripts that **cut deployment time from 1.5 hours to under 25 minutes** (75% reduction) — fully eliminating manual handoff steps across production and non-production release cycles.
- Managed **Azure DevOps CI/CD pipelines** for 2+ years — continuous integration, continuous deployment, release approvals, and pipeline triage — across multi-client environments using Agile methodology.
- Coordinated **70+ weekly ServiceNow (ITIL) requests** — SQL deployments, production releases, change management — with **zero SLA breach** across all production cycles.
- Administered end-to-end **SSL certificate lifecycle** — installation, renewal, and compliance tracking — across test and production servers for multiple enterprise clients.
- Implemented containerization and CI/CD workflows using **Jenkins, Docker, Kubernetes (AKS), and Argo CD** to streamline microservices delivery and reduce pipeline lead time.
- Authored **50+ internal white papers** on Azure DevOps pipeline setup, Terraform state management, and CI/CD architecture — cut new engineer onboarding time and reduced reliance on external consultants.

PROJECTS — 4 LIVE SAAS TOOLS

DevOps Interview Copilot — Live SaaS

[devops-interview-copilot.vercel.app](#)

AI-powered interview practice platform for DevOps, Platform Engineering & SRE roles — structured question sets, AI-evaluated answers, session history. Stack: **React + Vite, Groq LLM, FastAPI**; deployed on Vercel + Render.

Kubernetes YAML Validator — Live SaaS

[kubernetes-yaml-validator.vercel.app](#)

Validates Kubernetes manifests, detects errors by resource scope, and returns an AI-generated fixed YAML. Stack: **React + Vite, Python/FastAPI, Groq API, Docker**; deployed on Vercel + Render.

AI DevOps Incident Copilot — Live SaaS

[ai-dev-ops-incident-copilot.vercel.app](#)

Paste Azure DevOps or GitHub Actions pipeline logs — AI returns **root cause, fix recommendations, and severity** (LOW/MEDIUM/HIGH/CRITICAL). Stack: **React + FastAPI + Groq LLM**; Docker; Vercel + Render.

Azure Pipeline YAML Generator — Live SaaS

[azure-pipeline-yaml-generator.vercel.app](#)

Generates Azure DevOps pipeline YAML for Docker, Node, Terraform, .NET, Python, and generic workflows from a guided UI. Stack: **React + Vite, Groq LLM**; deployed on Vercel.
